                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NVWHIRE
Vasopressin / neurophysin 2 precursor - finback whale (tentative sequence) (fragment)
NYOHIRE
N'SODITAINS: APE-Vasopressin, neurophysin 2
C'Species: Baldaenoptera physalus (finback whale, common rorqual)
C'Species: Baldaenoptera physalus (finback whale, common rorqual)
C'Accession: Baldaenoptera physalus (finback whale, common rorqual)
C'Accession: Baldarion of finback wh. T.
Nature 201, 191-192, 1964
A.Title: Isolation of finback whale oxytocin and vasopressin.
A.Reference number: A93147
A.Accession: B93147
A.Molecule type: protein
A.Residues: 1-9 <ACH>

PTW: Undergoes a complex proteolytic maturation which generates a variety of processed secreted forms with increased activity toward variety of processed secreted first form an antiparallel homodimer linked by disulfide bonds before secretion. The fully processed VEGF-D is composed mostly of two VEGF homology domains (VHDs) bound by non-covalent interactions.

SIMILARITY: Belongs to the PDGF/VEGF growth factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SMART; SMUUL41; FLOE, . . .

VEGF.D first form an antiparallel homodimer linked by disulfide bonds before secretion. The fully processed VEGF-D is composed mostly of two VEGF homology domains (VHDs) bound by non-covalent interactions (By similarity). SIMILARITY: Belongs to the PDGF/VEGF growth factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          28-FEB-2003 (Rel. 41, Last sequence update)

Garacterization and expression of vascular endothelial growth
factor (VEGF) in the ovine corpus luteum.",
J. Reprod. Ferril. 108:157-165(1996).
-! FUNCTION: Growth factor active in angiogenesis, vasculogenesis and
endothelial cell growth. It induces endothelial cell
proliferation, promotes cell migration, inhibits apoptosis, and
induces permeabilization of blood vessels. It binds to the
VEGFRI/FIL-1 and VEGFR2/Kdr receptors and to heparan sulfate and
heparin (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -!- SUBUNIT: Homodimer; disulfide-linked. Also found as heterodimer with PlGF (By similarity).
-!- SIMILARITY: Belongs to the PDGF/VEGF growth factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ovis aries (Sheep).

-!-FUNCTION: Growth factor active in angiogenesis, and endothelial cell growth. Induces endothelial proliferation and vascular permeability (By similarity).

-!- SUBUNIT: Homodimer; disulfide-linked. Also found as heterodimer with PIGF (By similarity).

-!- SUBCELLILAR LOCATION: Secreted but remains associated to cells or to the extracellular matrix unless released by heparin (By
                                                                                                                                                                                                                                                                                                                                                                                                 01-AUG-1992 (Rel. 23, Created)

```
factor specific for vascular endothelial cells.";
Blochem. Biophys. Res. Commun. 161:851-858(1989).
-! FUNCTION: Growth factor active in anglogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell proiferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the vBGFR1/Flt-1 and vBGFR2/Kdr receptors and to heparan sulfate and heparin (By similarity).
-! SUBUNIT: Homodimer; disulfide-linked. Also found as heterodimer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      with PIGF (By similarity). SubcELLULAR LOCATION: Secreted but remains associated to cells or to the extracellular matrix unless released by heparin (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PTM: Undergoes a complex protectivity maturation which generates a variety of processed secreted forms with increased activity toward VEGFR-3 and VEGFR-2. VEGF-D first form an antiparallel homodimer linked by disulfide bonds before secretion. The fully processed VEGF-D is composed mostly of two VEGF homology domains (VHDs) bound by non-covalent interactions (By similarity).

proliferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the vEGFRI/Flt-1 and VEGFRZ/Kdr receptors and to heparan sulfate and heparin (By similarity)
SUBUNIT: Homodimer, disulfide-linked. Also found as heterodimer SUBCELLULAR LOCATION: VEGF-1 and VEGF-2 are secreted while VEGF-3 remains cell-surface associated unless released by heparin. ALTERNATIVE PRODUCTS:

Vascular endothelial growth factor A precursor (VEGF-A) (Vascular VEGF OR VEGFA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 Isoda=15612-4; Sequence=VSP 004631;
-1- TISSUE SPECIFICITY: Expressed in the pituitary, in brain, in particularly in supraoptic and paraventricular nuclei and the choroid plexus. Also found abundantly in the corpus luteum of ovary and in kidney glomeruli.
-!- SIMILARITY: Belongs to the PDGF/VEGF growth factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE FROM N.A.     gumented (NOV-2000) to the EMBL/GenBank/DDBJ databases.
    Submitted (NOV-2000) to the EMBL/GenBank/DDBJ databases.
    FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell growth. It induces endothelial cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1 and VEGFRI/FIL-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Submitted (MAR-1999) to the EMBL/GenBank/DDBJ databases.
-- FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFRI/Filt-1 and VEGFRZ/Kdr receptors and to heparan sulfate and heparin (By similarity)
--- SUBDNIT: Homodimer; disulfide-linked. Also found as heterodimer with PIGF (By similarity).
--- SUBCELDUAR LOCATION: Secreted but remains associated to cells or to the extracellular matrix unless released by heparin (By

-! FANET JON: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell growth. It induces endothelial cell proprietation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFR1/FIL and VEGFR2/Kdr receptors and to heparan sulfate and heparin. Neuropilin-1 binds isoforms VEGF-165 and VEGF-145.

-: SUBUNIT: Homodimer; disulfide-linked. Also found as heterodimer X-TAY CRYSTALLOGRAPHY (1.9 ANGSTROMS) OF 39-134.

-!-FUNCTION: Growth factor active in angiogenesis, and endothelial cell growth, stimulating their proliferation and migration and also has effects on the permeability of blood vessels. May function in angiogenesis of the venous and lymphatic vascular systems during embryogenesis, and also in the maintenance of differentiated lymphatic endothelium in adults. Binds and activates VEGFR-2 (FIXI) and VEGFR-3 (FIX1) receptors.

-:- SUBUNIT: Homodimer; non-covalent and antiparallel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .

-1- SUBCELLULAR LOCATION: Secreted.
-1- FTM: Undergoes a complex proteolytic maturation which generates a variety of processed secreted forms with increased activity toward vEGFR-3, but only the fully processed form could activate VEGFR-2. VEGFR-3, but only the fully processed form could activate VEGFR-2. VEGF-C first form an antiparallel homodimer linked by disulfide bonds. Before secretion, a cleavage occurs between arg-227 and ser-228 producing an heterotetramer. The next extracellular step of the processing removes the N-terminal propeptide. Finally the mature VEGF-C is composed mostly of two VEGF homology domains (VHDs) bound by non-covalent interactions (By similarity).
-1- SIMILARITY: Belongs to the PDGF/VEGF growth factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  VASCULAR ENDOTHELIAL GROWTH FACTOR C.

"A novel vascular endothelial growth factor encoded by orf virus,
VEGF-E, mediates angiogenesis via signalling through VEGFR-2 (KDR) but
not VEGFR-1 (FIL-1) receptor tyrosine kinases.";

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues.

WPI; 2001-442248/47.

Claim 59; Page 32; 102pp; English.

whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomerric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidiasing the expision and exposed loop of a growth factor protein and cyclising the peptide by oxidiasing the peptide with at least one amino acid deleted prior peptides, dimeric bicyclic peptides (Comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior cyclisation are used to interfere with anglogenesis, necessaries and anglogenesis in a mammal with a condition characterised by anglogenesis, necessaries and paper or condition is diabetic retinopathy, psoriasis, arthropathy, cerebrovascular accident, post-angloplasty restencis, head, heat or corresponding, vascularised necessaries are also used to modulate vascular permeability in a mammal (the mammal has a condition of the liver, excessive corpusion. The peptides are also used to modulate vascular permeability in accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic corpusion in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic corpusion in peripheral activity induced by VEGF. VEGF-C or D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation with an anti-inflammatory agent, to treat a chronic inflammation with an anti-inflammatory agent, to treat a chronic inflammation with an anti-inflammatory agent, to treat a chronic inflament. The sequence represents a dimeric bicyclic peptide of the invention, Human; VEGF-D; vascular endothelial growth factor; angiogenesis; .; 0 neovascularisation, lymphanglogenesis, psoriasis, tumour, diabetes induced neovascular sequelae, rheumatoid arthritis, diabetic retinopathy, chronic inflammation. Novel monomeric monocyclic peptide, used to interfere with angiogenesis,

°,

Gaps

```
The sequence represents Human VEGF-D (vascular endothelial growth factor)

amino acids Val101-Thr 173, used together with the C-terminal 23 residues

CC of VEGF to make a hybrid theoretical molecule for 3 dimensional

condelling. The sequence is used in a method of producing a monomeric

modelling. The sequence is used in a method of producing a monomeric

con opposite antipazallel strands of a peptide loop fragment from an

exposed loop of a growth factor protein and cyclising the peptide by

coxidising the cysteine residues. The monocyclic peptides, dimeric

coxidising the cysteine residues. The monocyclic peptides dimeric

coxidising the cysteine residues. The monocyclic peptides of a cyclic

cc betyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic

coxidising the cysteine residues. The monocyclic peptides by

coxidising the cysteine residues. The monocyclic peptides by

coxidising the cysteine residues in remained a link a condition or characterised by

completed with at least one amino acid deleted prior to cyclisation are

coxidising the cysteine residues; newsecularisation or

coxidising the cysteinesis, arthropathy, hemangiomer. The condition is

diabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised

coxidition to repend to model the liver, excessive hormone-related angiogenic

condition characterised induced neovascular sequelae, hypertension induced

condition characterised by fluid accumulation. The peptides are also

condition characterised by fluid accumulation in peripheral limbs or in

clungs, peritoneal cavity, pleura, or brain. The peptides are used to

inage blood vessels and lymphatic vasculature. The monomeric and bicyclic

inage blood vessels and lymphatic vasculature. The monomeric and bicyclic

induced by VEGF-C or -D and are also used in combination with an

cultiliammatory agent, to treat a chronic inflammation, especially year

condition arthritis, psoriasis and diabetic retinopathy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
or lymphangiogenesis, is produced by cyclizing a peptide loop fragment trom an exposed loop of a growth factor protein by oxidizing the cysteine residues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The sequence represents Human VEGF-D (vascular endothelial growth factor)

amino acids Val101-PRO186. The sequence is used in a method of producing
ca monomorpic monocyclic peptide by a measuring beta-beta carbon separation
distances on opposite antiparallel strands of a peptide loop fragment
from an exposed loop of a growth factor protein and cyclishing the peptide
conversation of proteine residues. The monocyclic peptides, dimeric
bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic
peptide with at least one amino acid deleted prior to cyclisation are
used to interfere with angiogenesis, neovascularisation or lymphangiogenesis. The condition is
used to interfere with angiogenesis, neovascularisation or lymphangiogenesis. The condition is
diabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised
angioplasty restenosis, head, heat or cold trauma, substance-induced
neovascularisation of the liver, excessive hormone-related angiogenic
dysfunction, diabetes induced neovascular sequelae, hypertension induced
neovascular sequelae, or chronic liver infection. The peptides are also
used to modulate vascular permeability in a mammal (the mammal has a
condition characterised by fluid accumulation in peripheral limbs or in
lungs, peritoneal cavity, pleura, or brain. The peptides are used to
image blood vessels and lymphatic vasculature. The monomeric and bicyclic
peptides are used to interfere with at least one biological activity
articles are used to interfere with at least one biological activity
articles are used to interfere with at least one biological activity
articles articles and lymphatic vasculature. The monomeric and bicytles articles and interfere with at least one biological activity articles articles and interfere with a least one biological activity articles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                      Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Vascular endothelial growth factor; VEGF; VEGF-D; malignant melanoma; tumour; psoriasis; angiogenesis; lymphangiogenesis; skin graft; wound healing; lymphedema; scleroderma; anhydrotic ectodermal dysplasia.

The present sequence represents human vascular endothelial growth factor (VGGF)-D. The specification describes a human cell line which stably expresses VEGF-D, or fragments/analogues having VEGF-D biological activity. VEGF-D antagonists, e.g. antisense nucleic acids or triplex useful for the treatment or alleviation of malignant melanomas, tumnours or psoriasis. Angiogenesis and lymphangiogenesis stimulating amounts of VEGF-D can be administered to enhance the acceptance and/or healing of skin grafts or to stimulate the healing of a surgical or traumatic wound to the skin. Lymphangiogenesis stimulating amounts of votes I ymphedema. Endothelial proliferation stimulating amounts of VEGF-D are used to treat antibodice act scleroderma. Vascularisation stimulating amounts of verse be used to treat antibodice ctodermal dysplasia. VEGF-D antibodies are useful for detecting tumours expressing VEGF-D. Pully-crocessed VEGF-D can be used to stimulating amounts of successed VEGF-D can be used to stimulate at least one vEGF-D incoactivity chosen from endothelial cell proliferation, migration, survival and differentiation and lymphangiogenesis without inducing vascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ó
                                                                                                          A human cell line stably expressing vascular endothelial growth factor D,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         monoclonal antibody; VEGF receptor; VEGFR-2; VEGFR-3; vascular permeability disorder; endothelial cell proliferative disorder; anglogenic disorder; propriet disorder; neovascularisation disorder; endothelial cell differentiation disorder; cancer; diabetic retinopathy; psoriasis; arthropathy; pulmonary oedema; detection; diagnosis; imaging; lymphatic vasculature.

                                                 Novel compositions comprising antibodies reactive to vascular endothelial growth factor-D, useful for treating, e.g. angiogenesis, lymphogiogenesis and neovascularization disorders.
                                                                                                                                                                           (vascular endothelial growth factor D), lacking both the N- and C-terminal regions. The invention relates to a monoclonal antibody, or fragments thereof, which is specifically reactive with the truncated human VEGF-D, and methods of preparing the antibody. The antibody of the invention interferes with the binding of VEGF-D to the VEGF receptors VEGFR-2 and VEGFR-3, but does not interfere with the binding of VEGF to these receptors and additionally is not reactive with VEGF.C. The antibody may be used to treat disorders associated with vascular permeability, endothelial cell proliferation, angiogenesis, lymphangiogenesis, neovascularisation and endothelial cell differentiation, especially cancer, diabetic retinopathy, psoriasis, and arthropathies. The antibody may also be used to treat fluid accumulation in the heart and/or lung via medulation of vascular permeability. It may additionally be used to detect VEGF-D and may be used to image lymphatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; single-chain; extracellular ligand-binding domain; VBGF;

```
This invention describes a novel single-chain dimeric polypeptide which binds to extracellular ligand-binding domain of vascular endothelial growth factor (VEGF) type 2 receptor (KDR) or VEGF type 3 receptor (FIL-4). The polypeptide of the invention comprises two receptor-binding sites of which one is capable of binding to a ligand-binding domain of the receptor, and at least one monomer of the dimeric comain of the receptor, and at least one monomer of the dimeric polypeptide is derived from VEGF. Or VEGF-C or VEGF-D, where the polypeptide of scapable of binding to the receptor, but incapable of activating the receptor. The polypeptide of the invention is useful for preparing a medicament for preventing or treating a disease or condition involving increased signal transduction from, or an increased activation of a VEGF or type 3 receptor e.g. for inhibiting angiogenesis or I will be additioned and used in the construction of a VEGF-D monomer which can be modified and used in the construction of a VEGF-D and KDR antagonist described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                Novel single-chain dimeric polypeptide for inhibiting angiogenesis, binds to extracellular ligand-binding domain of vascular endothelial growth factor type 2/type 3 receptor but does not activate the receptor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                  This invention describes a novel human endothelial growth factor polypeptide which has cytostatic activity. The polypeptide and its encoding polymotleotide are useful in the diagnosis, prevention, and treatment of cancer and other conditions or diseases involving angiogenesis and cell proliferation. NVR may also be used to promote reconstruction or added to a tissue culture to promote vasculagenesis in tissues for autologous or heterologous transplant. Antagonists or inhibitors of NVR may be used to suppress or prevent angiogenesis and thus prevent the growth and development of cancers such as cancer of the brain, breast, intestine, kidney, lung, ovary, pancreas, prostate or uterus. The products of the invention can be used for gene therapy. This sequence represents the human NVR protein described in the disclosure of
                                                                                                                                                                                New endothelial growth factor polypeptide and polynucleotides, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               vascular endothelial growth factor; VEGF-D; angiogenesis; modification;

The sequence is that of human breast vascular endothelial growth factor D (VBGF-D). VBGF-D can be used for e.g. acceleration of angiogenesis in wound healing, tissue or organ transplantation, or to establish collateral circulation in tissue infarction or arterial stenosis, such as coronary artery disease, and inhibition of angiogenesis in the treatment treatment of cancer or of diabetic retinopathy. It can also be used in the treatment treatment of lung disorders to improve blood circulation in the lung and/or gaseous exchange between the lungs and the blood stream or to improve blood circulation to the heart and 02 gas permeability in cases of cardiac insufficiency, to improve blood flow and gaseous exchange in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                chronic obstructive airway disease, or to treat malabsorptive syndromes in the intestinal tract. Quantitation of VBGF-D in cancer biopsy specimens may be useful as an indicator of titure metastatic risk. Antagonists can be used for treating e.g. conditions such as congestive heart failure, involving accumulations of fluid in the lung resulting from increases in vascular permeability. The products can also be used for detection and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated vascular endothelial growth factor-D - used to develop products for use in e.g. modifying angiogenesis or treating lung, heart or intestinal disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; angiogenic protein; wound healing; vascular tissue repair;
peripheral arterial disease; critical limb ischaemia; coronary disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        qq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence is vascular endothelial growth factor-D (VEGF-D), which is an angiogenic protein of the invention. The angiogenic proteins and the DNA sequences encoding them, are used to prevent, treat or ameliorate disease and to detect diseases, or susceptibility, by detecting mutations or the presence or amount of angiogenic protein expression. Particularly citssue, and for repair of vascular tissue, especially peripheral arterial disease, critical limb ischaemia or coronary disease. Antagonists of the sequences are used to inhibit angiogenesis in tumours and to treat inflammation (where associated with increased vascular permeability), diabetic retinopathy, rheumatoid arthritis or psociasis. Agonists are also used to identify specific binding agents (potential therapeutic agents) cand to raise antibodies. The antibodies are useful as therapeutic agents) cand to raise antibodies. The antibodies are useful as therapeutic cand to raise antibodies. The antibodies are useful as therapeutic continuing when linked to e.g. a label or cytocial, and for in vivo or in vitro diagnosis (including imaging) or for therapy continuing when linked to e.g. a label or cytocial, and for the immunotyping of cells, e.g. for detecting minimal residual disease or immunotyping of cells, e.g. for detecting minimal residual diseases continually bacterial, fungal or parasitic); neurodegeneration, also as chemotactic agents or for treating regeneration of the nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô

The present sequence represents human vascular endothelial growth factor D (VEGF-D). The VEGF-D protein, compounds and antibodies, which can bind the protein, may be useful in, e.g. gene therapy and in treatment of inflammation and oedema. Vectors, containing the VEGF-D DNA, and VEGF-D DNA sequences may be used for screening for the compounds which bind to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human zvegf2 growth factor; mitogen; fibroblast; smooth muscle cell; venous stasis ulcer; diabetic ulcer; skin wound; chemotactic effect; angiogenic effect; tumour; diabetic retinopathy; psoriasis; arthritis; scleroderma.

The sequence is that of human lung vascular endothelial growth factor D (VEGF-D). VEGF-D can be used for e.g. acceleration of angiogenesis in wound healing, tissue or organ transplantation, or to establish collateral circulation in tissue infarction or arterial stenosis such as coronary artery disease, and inhibition of angiogenesis in the treatment of cancer or of diabetic retinopathy. It can also be used in the treatment of lung disorders to improve blood circulation in the lung and/or gaseous exchange between the lungs and the blood stream or to improve blood circulation to the heart and O2 gas permeability in cases of cardiac insufficiency, to improve blood flow and gaseous exchange in chronic obstructive airway disease, or to treat malabsorptive syndromes in the intestinal tract. Quantitation of VEGF-D in cancer biopsy control constructive airway disease, or to treat malabsorptive syndromes in the intestinal tract. Quantitation of VEGF-D in cancer biopsy companies can be used for treating e.g. conditions such as congestive heart failure, involving accumulations of fluid in the lung resulting from it can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  VEGF-X; vascular endothelial growth factor; human; vulnerary; cytostatic; antirheumatic; antiarthritic; antipsoriatic; antidiabetic; treatment; angiogenesis regulator; vascularization regulator; cancer; psoriasis; rheumatoid arthritis; diabetic retinopathy; blood vessel; organ repair;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated vascular endothelial growth factor-D - used to develop products for use in e.g. modifying angiogenesis or treating lung, heart or intestinal disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2; Length 354;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a human zvegf2 growth factor encoded by the zvegf2 cDNA which was isolated from a human heart cDNA library.

Tyegf2 protein in a dimeric form acts as a mitogen for fibroblasts or smooth muscle cells. zvegf2 is claimed to be useful for stimulating the revascularisation of tissue or the re-endochelialisation of vascular classue. Zvefg2 is particularly claimed to be useful for the treatment of till-thickness skin wounds, including venous stasis ulcers and diabetic ulcers. The zvegf2 protein is also claimed to be useful as an additive in tissue adhesives for promoting revascularisation of the healing tissue. The zvegf2 protein is also claimed to be useful as an additive in tissue adhesives for promoting revascularisation of the healing tissue. Chemotactic and angiogenic effects. The antagonists may therefore be useful for reducing growth of solid tumnours by inhibiting the nevascularisation of the developing tumour or by directly blocking tumour cll growth, in the treatment of diabetic retinopathy, psoriasis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated vascular endothelial growth factor - used to develop products for treating e.g. wounds, burns, myocardial infarction, tumours, psoriasis, arthritis, restenosis or organ transplants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               vascular endothelial growth factor; VEGF-D; angiogenesis; modification; acceleration; wound healing; tissue; organ; transplants; collateral circulation; infarction; arterial stenoais; coronary artery disease; inhibition; cancer; treatment; diabetic retinopathy; lung disorders; blood circulation; gaseous exchange; chronic obstructive aliway disease; intestinal malabsorptive syndrome; biopsy; metastatic risk; detection; diagnosis; congestive heart failure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ·

```
Treating neoplastic diseases such as lymphoma, carcinomas, melanomas and sarcomas, involves administering a compound capable of inhibiting binding of ligand proteins to fms-like tyrosine kinase-1 receptor.
                                                                                                                                                                                                                                                                                                                 Example 15-17; Page 142-143; 148pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes a novel vascular endothelial growth factor-X (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has valentary, cytostatic, antirheumatic, antirheumatic, antiproriatic and antidlabetic activity and acts as an angiogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rhewarded arthritis, psoriasis and diabetic retinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues regeneration are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair, proliferation of new blood vessels, tissue regeneration and organ repair, proliferation of new blood vessels, issue regeneration and organ repair by promoting angiogenic activity or vascularization. This sequence represents the human VEGD protein used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .

The patent discloses a method to treat neoplastic disease characterised by expression of fms-like tyrosine kinase 4 (Flt4) receptor (also referred as vascular endothelial growth factor receptor-3, vEGFR-3) in endothelial cells of blood vessels adjacent to malignant neoplasm. The endothelial cells of blood vessels adjacent to malignant neoplasm. The rethod involves administering a compound that inhibits binding of a ligand threrby inhibiting Flt4 mediated proliferation of vascular endothelial cells. The compound is useful for treating neoplastic disease such as breast carcinomas, squamous cell carcinomas, lymphomas, melanomas con and sarcomas. Flt4 receptor tyrosine kinase binding compounds can be used for manufacturing medicament useful for diagnostic screening, imaging and treatment of malignancies characterised by Flt4-expressing blood cells.

The Flt4 gene maps to chromosomal region 5q3s and is expressed as 5.8 kb and 4.5 kb mRNAs which differ in their 3' sequences and are cufferentially expressed in HEL and DAMI cell lines. Flt4 belongs to a subfamily of class III receptor tyrosine kinases (FTKS). It is used as a carget for tumour imaging and anti-tumour therapy. The present sequence is a human prepro-vascular endothelial growth factor D (VGF-D), a specific example of Flt4 binding compound. A recombinantly matured VBGF-D lacking residues 1-92 and 202-354 retains the ability to activate VBGFR-2 and VBGFR-3 receptors and associate as non-covalently linked dimers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vascular endothelial growth factor-D; VEGF; human; re-endothelialisation; vascular endothelial growth factor receptor; VEGFR; vascular tauma; blood vessel; cardiovascular surgery; anti-restenosis agent; prevention; restenosis; stenosis; percutaneous transluminal coronary angioplasty.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present amino acid sequence is the complete human prepro-vascular endothelial growth factor (VEGF)-D. VEGF-D has the ability to stimulate re-endothelialisation of an injured blood vessel, without significant stimulation of smooth muscle cell proliferation. It can bind to and stimulate VEGFR-2 (vascular endothelial growth factor receptor) and/or VEGFR-3 phosphorylation in cells that express such receptors. An antiseteneousis agent comprising either a VEGF-D gene or protein is used in a method to reduce or prevent restenosis and stenosis of a blood vessel following vascular tranma e.g., cardiovascular surgery and percutaneous transluminal coronary angioplasty
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Preventing stenosis and restenosis in mammals using vascular endothelial growth factor proteins or the nucleic acids encoding them.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1,
